

Drake University Hosts - Screening To Detect Your Risk For Stroke In Less Than 10 Minutes!

Employees, Spouses and Retirees Screen For \$99!

"Your service saved my life. I have had surgery on both of my Carotid Arteries, an Aortic Aneurysm repaired and plastic inserts put in both Femoral Arteries. One of my Carotid Arteries was 99% blocked and the other 80%. I was a walking stroke. My doctor suggested I have the tests. I am so thankful he did. I have been telling everyone about your service." **Dale Wilson – W. Des Moines, IA**

"Your screenings are priceless. I had surgery on November 15th for an Aortic Aneurysm. After eleven days in the hospital I am doing fine. I am so thankful I came in, as I had no idea. I should have done this a long time ago. I continue to let everyone know about your very good service." **Richard Wieskamp – Urbandale, IA**

Wednesday March 28th 10:30 a.m. to 2:30 p.m.

Drake University – Olmsted Center Rooms 310 & 311

Appointments are necessary. **Sign Up Online at**

Four Life Saving Screenings Only \$99

Stroke Screening

This screening visualizes the buildup of fatty blockage in the carotid arteries. This condition causes the majority of strokes.

Abdominal Aortic Aneurysm

This screening visualizes the existence of an aneurysm in the abdominal aorta that can rupture and be fatal.

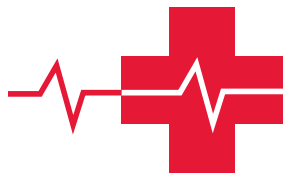

Peripheral Arterial Disease

This screening checks for blockages in the legs. Abnormal results indicate high risk of coronary artery disease and peripheral arterial disease.

Atrial Fibrillation (EKG)

This EKG is a screening to identify the presence or an absence of Atrial Fibrillation, also known as irregular heartbeat, a condition that can cause a stroke.

Reimbursable Under Your Flexible Spending Account!

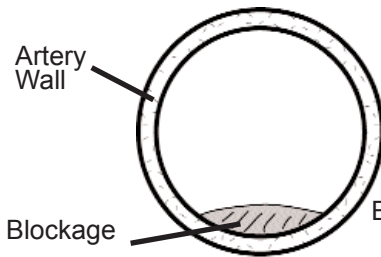

STROKE DETECTION *Plus*

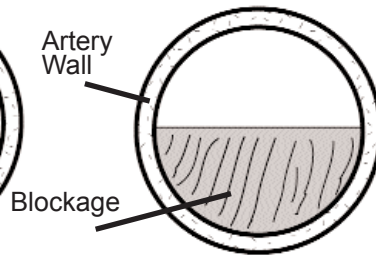

PREVENTION THROUGH EARLY DETECTION

Artery Blockage

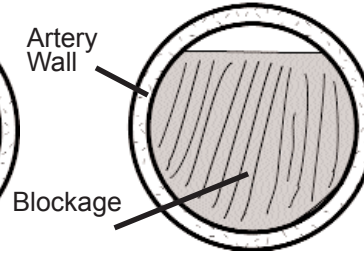

Mild

Moderate

Critical

This blockage is a silent, progressive condition, that causes stroke and heart disease. This condition is treatable and the best way to detect your risk is with ultrasound screenings.

- + We provide screenings that would cost between \$300-\$700 per test in the hospital setting.
- + A doctor cannot order these tests without the patient showing signs & symptoms. It is estimated that two thirds of stroke victims did not have any warning.
- + We estimate the percentage of blockage based on new research from the University of Washington.
- + A board certified, licensed physician reviews all screening results.
- + The goal of this screening is to alert people of a health risk that might otherwise go undetected, and to inform them of the need for follow-up with their physician.
- + RN phone consultation for all abnormal results.

Two Or More Conditions And You Are At Risk!

- Over 40 yrs. old
- More Than 20lbs. Overweight
- Family History of Strokes
- High Cholesterol
- Cigarette Smoking
- Diabetes
- High Blood Pressure
- Inactive Lifestyle
- Heart Disease
- TIAs - Minor Strokes
